

EPN Launches RF & Wireless Blog

PARIS, 6 July 2009 - EPN launches its second blog this week – the RF & Wireless Blog - <http://blog.epn-online.com/rfwirelessblog> - featuring daily posts on the world of RF/Microwave & Wireless components, technology, systems, standards, applications and events from a European perspective by RF specialist Helen Duncan. The RF & Wireless Blog joins the EPN Distiblog – <http://blog.epn-online.com/distiblog> - launched last year and written by EPN Distribution & Test Editor and electronics industry veteran Mick Elliott. Daily posts from both blogs are streamed direct to the EPN Home Page in the blogs section.

EPN is delighted to be associated with Helen in launching this new blog as part of a strategy to keep the EPN main website focused mostly on new products while a satellite network of blogs around the EPN core site digs deeper into key electronic product technology and application areas such as RF & Wireless and Distribution, with more to follow...

Helen has terrific credentials to write on this subject and has extensive experience in the field of RF, microwave & wireless communications. An engineer with a BSc in Electrical & Electronic Engineering from Leeds University – as well as a Chartered Engineer and IET and IEEE member - Helen began her career (1977-89) as a development engineer and project manager with Plessey Three Five Group in the UK (formerly Plessey Optoelectronics & Microwave), later becoming Marketing Manager for Plessey's GaAs microwave and optoelectronic products.

She then moved on to become Marketing Manager of Rohm Electronics (UK). Helen also has considerable experience in technical journalism, PR and market analysis, having worked as: Editor of Microwave Engineering Europe; as Technical Director of European Microwave Week, Wireless Design Conference, Wireless Broadband Forum and Chair of a series of workshops on RF technology, mobile communications and wireless broadband technology; and as the author of market reports on passive devices, semiconductors and RF/microwave components for organisations such as Frost & Sullivan, Reed Elsevier, CMP and the Federation of the Electronics Industry (now Intellect).

So if you're an active player in the RF/Microwave & Wireless space, please do add Helen to your contact list and route relevant PR and press queries to Helen as well as to EPN Editor-in-Chief Caroline Hayes to ensure you get the opportunity to be published in either EPN itself and/or the RF & Wireless Blog.
